Project Design Phase-II Customer Journey Map

Date	20 October 2022 PNT2022TMID48907 Natural Disasters Intensity Analysis And Classification Using Artificial Intelligence		
Team ID			
Project Name			
Maximum Marks	4 Marks		

CUSTOMER JOURNEY MAP

Document an existing experience

Narrow your focus to a specific scenario or process within an existing product or service. In the **Steps** row, document the step-by-step process someone typically experiences, then add detail to each of the other rows.

As you add steps to the experience, move each these "Five Es" the left or right depending on the scenario you are documenting.

					g on the scenario ocumenting.
Natural disasters intensity analysis and classification using Al	Entice How does someone initially become aware of this process?	Enter What do people experience as they begin the process?	Engage In the core moments in the process, what happens?	Exit What do people typically experience as the process finishes?	Extend What happens after the experience is over?
Steps What does the person (or group) typically experience?	Users become aware of the Al model through advertisements and social media social m	Video frames captured for the intensity analysis the disasters	Classifies the natural disaster and tells the there will be a server of the server of	Determination of the military and the military and to alert people if disaster of disaster disaster is predicted	Establishing Ins. vitil government and organizations for Mitigation Actuating Systems
Interactions What interactions do they have at each step along the way? = People: Who do they see or talk to? = Places: Where are they? = Things: What digital touchpoints or physical objects would they use?	Interaction with people who are familiar with product	Use of hardware on screen interfaces to communicate interfaces to communicate	Interaction with scientists and disaster analysers monitoring	Communicate their feedback to service providers Contact the helpline in case of disaster detection	Interaction with the government agencies for taking appropriate functions spread awareness
Goals & motivations At each step, what is a person's primary goal or motivation? ['Help me' or "Help me avoid")	Simple user friendly To gain knowledge in the field of natural diseaser classification	To make full use of the functionality of the model	Improved response time Accurate prediction	Examining the numbers of featilities, injuries life and property	Ensuring better service to customers provided
Positive moments What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?	Motivated to save human and property Productive algorithms and calculations for disaster classification	Designtful user possibility of possibility of interface experience experience tearning model using but the control of the cont	Designing light weight Web Application f model	Periodic forecasting Without interruption Ensuring Robust Operation across terrains and crimates	Examining the financial damage caused Implementing Helpline, Avarences and Threshold Actuating Systems
Negative moments What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?	Time consuming analysis algorithms	Fear of losing data Costly hardware and software components	Collection of large set of data is time consuming Frustation due to long duration of training of model	Failure due to technical issues Anger due to some error in resuts	Examining the false triggering and correcting it
Areas of opportunity How might we make each step better? What I deas do we have? What have others suggested?	Increased brand loyalty Advertising the model to public	Betterment of accuracy in prediction Retrieval of Training and testing data	Designing light weight Web Application of more number of data	Optimizing the AI Model with respect to real world environment	Maximizing the uptime of the Web App Service Examining the false triggering and correcting it
